EXPERIENCE

Software Engineer	Match Group, Tinder Service Platform ↗	June 2024 - Present
	<ul style="list-style-type: none">As a backend engineer, built and maintained scalable and shared services across Match Group under one backend infrastructure.Primary responsibilities include developing services for biometric verification, authentication, and fraud detection/clustering.These high-traffic services power many crucial features across the Match Group apps including Tinder, Hinge, etc.	
	Java / Spring Boot / PostgreSQL / Python / DynamoDB / Kafka / Redis	
Software Developer /Data Scientist	Children’s Hospital Los Angeles ↗	Jan 2021 - Oct 2023 (part-time before 2022)
	<ul style="list-style-type: none">Software development and Machine Learning research focused on EEG and signal processing.Developed machine learning based software that analyze and remove noise from infant EEG data using methods like Signal Processing (blind source separation), Computer Vision (movement analysis), resulting in up to 90% correct noise removal when compared to visual noise inspection results.Built in-house and contributed to open source projects like graphical data analysis full stack apps, participant recognition and tracking systems, and EEG IO tools as part of the research infrastructure.	
	Python / JavaScript / TensorFlow / Signal Processing / Computer Vision / EEG / MatLab	
Software Developer Intern	Royal Bank of Canada, Amplify ↗	May 2021 - Aug 2021
	<ul style="list-style-type: none">Built the first end-to-end YAML-configured monitoring deployment tool on RBC’s Site Reliability Engineering team. Advanced its infrastructure-as-code initiative and increased both its monitoring coverage and operational efficiency.Automated tasks like Prometheus onboarding using Consul and deploying Grafana dashboard templates for tools like MongoDB using Jsonnet with an 86% target stack coverage.My key contributions: configuration generator, deployer, YAML processor, and UI components.	
	JavaScript / Python / Flask / React / Kubernetes / IaC / Jsonnet / Docusaurus	

EDUCATION

B.S. in Computer Science	University of Southern California	2019 - 2022
	<i>Bachelor of Science in Computer Science (GPA: 3.8/4.0)</i>	
	<ul style="list-style-type: none">Relevant Coursework: Software Development, Advanced Data Structures & Algorithms, Operating Systems & Networking, Computer and Network Security, Computer Architecture, Computer Organization, Machine Learning, Artificial Intelligence, Probability Theory, Linear Algebra, Calculus, Discrete Math	

PROJECTS

Personal Project Full Stack	Shopper ↗	Since Oct 2023
	Purpose: one-stop solution for comparing grocery prices across different places. Built a web app that compares grocery prices from different stores and retailers. Supports unit price conversion and comparison. Features reactive front end built with Svelte.	
	Svelte / JavaScript / Go / SQLite / Cloudflare Workers	
Personal Project Android & Back end	“KnockKnock” ↗	Since Oct 2018
	Purpose: video conferencing app with unique features that suits my needs. Built a WebRTC based video conferencing app with features like real-time captioning, language identification, noise-cancelling, and manual camera controls. Used Machine Learning for audio/image processing.	
	Android / Kotlin / Java / WebRTC / Python / Firebase / PHP / C++ / TensorFlow	
Project Lead Full Stack	GreatFinds ↗	Sep 2020 to Nov 2020
	Software Development class final project, a platform that allows users to share all kinds of media content. Utilized the Java EE stack to develop server-client platform. Built the project structure with core components like JPA (database) and JSF. Led and coordinated efforts among all group members.	
	Java EE / JSF / JPA / MySQL / JavaScript	
Personal Project Cross Platform	Decide for Me ↗	Aug 2022 - Oct 2023
	Purpose: let the computer decide on places like restaurants for me to avoid making hard decisions. Built a cross-platform Flutter app that can pick places for the user randomly, weighed by ratings, using Yelp’s Fusion API. Supports filters based on location, distance, price, rating, hours, and more.	
	Flutter / Dart / JavaScript / Riverpod / Android

SKILLS AND TECHNOLOGIES

Languages: Java, Python, JavaScript, C/C++, Kotlin, SQL, HTML/CSS, Go, PHP, Bash, MATLAB
...more at jackzhang.me/skills ↗

Frameworks/Tools: Spring Boot, Android, React, Node.js, PostgreSQL, Svelte, Flask, Flutter, Firebase, MySQL, GCP, AWS, WebRTC, Redis, Kafka, Java EE, TensorFlow, Git.

ACTIVITIES/INTERESTS

Machine Learning
ACM
Hackathons (e.g. HackSC, HackMerced)
Answering questions on [Stack Overflow](#)
CTFs (e.g. picoCTF: 400/16000)
